

ABSTRACT OF THE DISCLOSURE

A system for conveying a string of packaging cushions includes a machine capable of manufacturing the string and a conveyor adapted to transport the string. The conveyor has an inlet end to receive the string and an outlet end to deliver the string of packaging cushions. The inlet end of the conveyor is higher than the cushion outlet elevation of the machine. At least one pair of rolls are adapted to lift the string of packaging cushions from the machine through the nip of the rolls to the conveyor inlet elevation.
